

Welcome to the UCI Health Rehabilitation Hospital Town Hall Discussion

June 2025

Welcome & Introductions

Overview of Joint Venture

Lifepoint Joint Venture Experience

Who We Are

- Partner of choice for major hospital systems and academic medical centers
- More than 47 standalone IRFs across 19 states (additional facilities under development)
- Proven rehabilitation management and services expertise to help nearly 30,000 patients annually

Our Partnership

- Focused on great patient outcomes with a partner centered approach to improve the lives of the patients we serve
- Build upon the strong reputation already established by our partners to meet the needs of the communities that they serve

Moving Forward Together

- Shared accountability, ownership and operations of the future facility
- Committed to ongoing engagement, transparent communications and the legacy of existing UCI Health

Lifepoint Accreditations

CARF

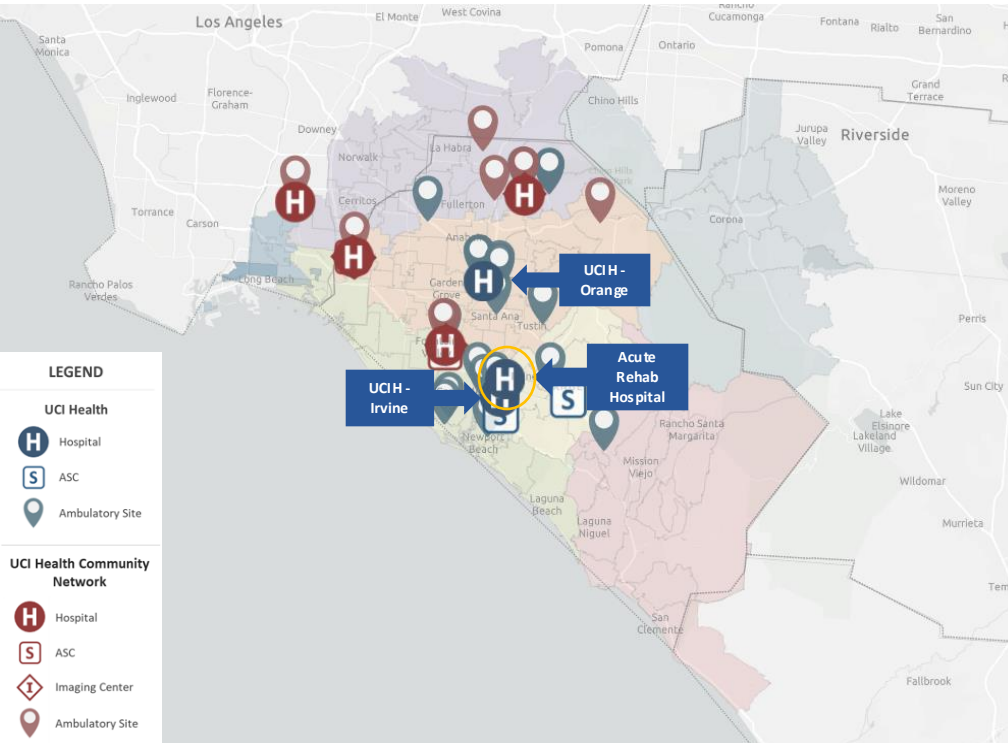

- 32 - Total Hospitals
- 27 - Stroke
- 7 - Brain Injury
- 9 - Amputation
- 2 - Spinal Cord
- 1 - Cancer

Joint Commission Specialty Accreditation

- 1 - Stroke
- 1 - Amputation
- 1 - Brain Injury

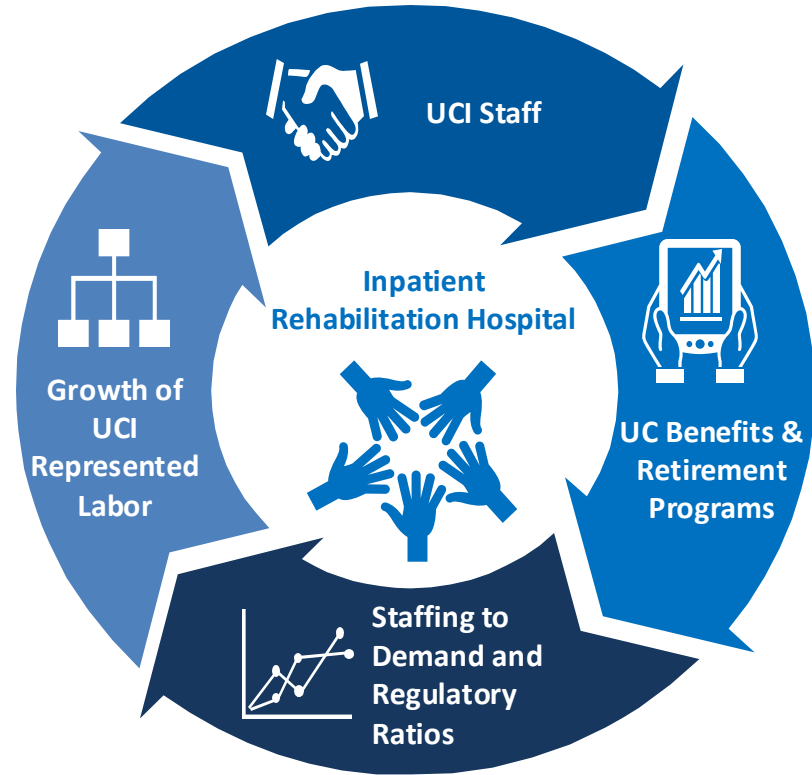

New Inpatient Rehabilitation Hospital By the Numbers

- Expanding from 14-bed Acute Rehabilitation Unit to **52-bed rehabilitation hospital**
- 68,000 square feet inpatient rehabilitation hospital
- Strategically located between UCIH-Orange & UCIH-Irvine (less than 3 miles from UCIH-Irvine)
- Location: 17931 Von Karman Ave, Irvine, CA

UCI Health coworkers to provide exceptional care at our new inpatient Rehabilitation Hospital through a services agreement

- Physicians
- Nursing
- Physical Therapist
- Occupational Therapist
- Speech Pathologist
- Case Management
- Hospital Assistant
- Food Services
- Dieticians
- Environmental Services
- Security Services

Construction Highlights

Sneak Peek of Building Highlights

Technology & Equipment

VECTORIZING TOWARDS CONFIDENCE, PERFORMANCE, SAFETY

The Vector Gait and Safety System is a ceiling-mounted harness that automatically adjusts to the patient's center of gravity as they move.

It allows patients to experience how it feels to fall and be caught, which can help them feel more comfortable and confident in the system to perform a variety of activities while maintaining a consistent level of body weight support.

It also allows therapists to focus on the quality of movement and the overall mobility activity. The Vector can help patients with a range of mobility levels and is used to treat a variety of conditions, including stroke, brain injury, spinal cord injury, and Parkinson's disease. It can also be used for orthopedic injuries.

Technology & Equipment

TECHNOLOGY DESIGNED TO RESTORE INDEPENDENCE

- **Lifeglov** is intended for individuals experiencing hand weakness or impaired motor function, particularly after neurological events such as stroke. It supports a wide spectrum of functional ability — from patients working on basic movement initiation to those refining grip strength and coordination.

bioliberty
life independent

Technology & Equipment

Barrett Upper-Extremity Robotic Trainer

BURT® PROVIDES PATIENT FOCUSED, EFFICIENT, SAFE TREATMENT TO FIT EACH PATIENTS NEEDS AND ADAPT TO ALL STAGES OF RECOVERY.

Burt® uses **state of the art GravityCradle™ technology** to support your arm as if you were in zero gravity— yes, it feels like your arm is floating! The robot does the grunt work and leaves your therapist more time to focus on you, **accelerating your recovery.**

Not only is Burt® effective, but it's also interactive and enjoyable. With biannual updates and many different activities from Blackjack to FishFood™ to LaundryLoader™, Burt ensures your therapy journey doesn't have to be dull.

Technology & Equipment

eksoBIONICS

Lower Extremity Robot

Exoskeleton technology is helping with endurance and allowing human capabilities to go beyond previous limits. Bringing hope to individuals who may be dealing with loss of mobility and independence or paralysis after a stroke, brain injury, or spinal cord injury.

Technology & Equipment

Rise&Walk InClinic Robotics

The Rise&Walk®, a full-spectrum gait trainer, is rehabilitation technology designed to provide activity-based therapy in seated, standing, and walking modes.

The adjustable assistance features are designed to challenge users and promote functional recovery. It targets muscle groups important for walking and facilitates locomotor-related movements to help a wide range of patients recovering from neurological injuries.

Technology & Equipment

Iso-Free is the TecnoBody system for **Health Fitness** that combines the 3D camera technology and the Strength Platform with the interactivity of the use combined with small tools.

Bridge between rehab and fitness functionality, Iso-Free exploits the TecnoBody force platform combined with the ability to manage the **loads of force** automatically through the pneumatic circuit and a simple gesture on the PC touch screen.

Technology & Equipment

LiteGait® is a body-weight support system and gait training device that provides a safe environment for patients to participate in gait training over a treadmill or over the ground. This system allows patients to begin gait training earlier in the rehabilitation process and at a lower level than would be feasible with any other assistive device available. T

The LiteGait system eliminates the fear of falling and/or loss of balance with standing and walking tasks and allows the therapist the ability to provide manual assistance to the legs and pelvis throughout the gait cycle to facilitate proper gait patterns.

Patient Care Focus

Lifepoint IRFs Recognized by Newsweek

Newsweek released its rankings for “America’s Best Rehabilitation Hospitals 2024” and Lifepoint had twenty-seven of its inpatient rehabilitation facilities (IRFs) recognized, with ten of those ranking first in their respective states (as noted in red below)

Lifepoint IRFs Recognized by Newsweek 2024

Ranked #1
in its state

- Atlantic Rehabilitation Institute (New Jersey)
- Baptist Memorial Rehabilitation Hospital (Tennessee)
- Community Rehabilitation Hospital North (Indiana)
- Dignity Health East Valley Rehabilitation Hospital – Chandler (Arizona)
- Lancaster Rehabilitation Hospital (Pennsylvania)
- Mercy Rehabilitation Hospital Oklahoma City (Oklahoma)
- Mercy Rehabilitation Hospital St. Louis (Missouri)
- Methodist Rehabilitation Hospital (Texas)
- UW Health Rehabilitation Hospital (Wisconsin)
- Virginia Mason Franciscan Rehabilitation Hospital (Washington)

Activation Timeline

Hospital Timeline

Our Past, Present and Future Together

Ground-Breaking

Break ground on the planned IRF hospital.

Q1 2024

Leadership Team

Onboard full complement of leadership staff.

Q1 2026

First Patient

First patient date anticipated in late June dependent on State regulatory approvals.

April 2026

Staff and Stock

Commence move-in and staff orientation/training activities.

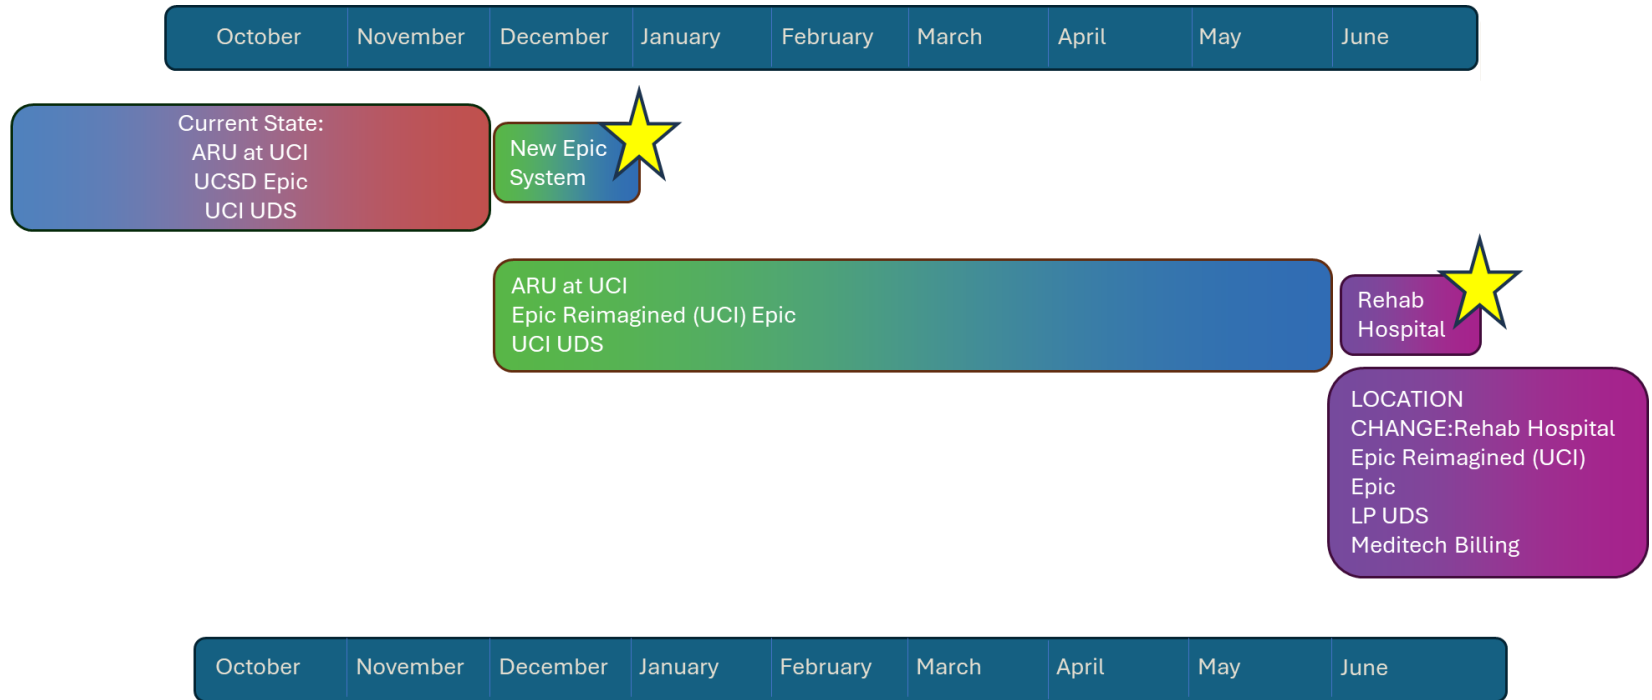

CMS Accreditation

Complete accreditation survey after admitting first 20 patients.

2-3 Wks Post First Patient

Explanation of Integration w/ Epic & UDS

Q&A Session

FAQs

- 1. Will staff moving to the new rehab hospital still be UCI Health employees? Will there be any changes in benefits, pay, or job titles? Will we keep our union?**
 - Yes, staff will remain UCI Health employees. No changes are expected in benefits, pay, or job titles. PTO and all benefits will be carried over. Staff will remain part of the union.
- 2. What will the nurse-to-patient ratio be?**
 - The nurse-to-patient ratio will follow the State of California regulatory requirements.
- 3. What levels of rehabilitative care will be provided (e.g., acute, subacute, long-term)?**
 - The facility will offer acute rehab care with the average length of stay estimated at 10–12 days.

Closing Remarks
