

Men's Health Services

At the UCI Health Center for Urological Care, we are proud to offer comprehensive men's health services that address the unique healthcare needs of men. Our urologists are leaders in the delivery and development of new techniques and treatments for male urological conditions and diseases.

Sometimes men's urological or sexual issues may be related to an underlying condition, such as diabetes, cardiac disease, high blood pressure, depression or poor nutrition. That is why we work closely with UCI Health specialists in cardiology, endocrinology, psychiatry, nutrition and other services to ensure the optimal health of each patient.

Conditions We Treat

Our urologists are experts at diagnosing all conditions of the male urological and genital tracts, including:

- Enlarged prostate and voiding dysfunction
- Erectile and ejaculation dysfunction
- Male infertility
- Peyronie's disease
- Prostate cancer
- Prostatitis
- Scrotal and testicular pain
- Testosterone deficiency
- Urethral stricture disease
- Urinary incontinence
- Urinary tract infections
- Varicocele (swelling of testicular veins)

Treatment for Enlarged Prostate (BPH)

Our fellowship-trained urology specialists offer the latest and safest treatments for an enlarged prostate (BPH). Symptoms include frequent need to urinate, weak or slow urinary stream, and a feeling that you cannot completely empty your bladder. Our men's health specialists can provide a thorough diagnosis and discuss the full range of treatment options available to you.

One of the latest BPH treatments is known as a prostatic urethral lift. The UroLift® device provides excellent outcomes for BPH sufferers. During the procedure, tiny stainless-steel implants lift or hold the enlarged prostate out of the way, so it no longer blocks the urethra, the tube that carries urine from your bladder out of your body. There is no cutting, heating, or removal of prostate tissue. Additionally, clinical studies have shown that the treatment is safe and effective in relieving lower urinary tract symptoms due to BPH without compromising sexual function.

Meet Our Specialist

Faysal A. Yafi, MD
Associate Professor of Urology
and Medical Director of
Men's Health Services

Akhil K. Das, MD
Clinical Professor, Urology

Additional Services We Offer

- Advanced and complex penile prosthesis surgery (malleable and inflatable)
